

smartChute™

automated returns unit

Internal smartChute™

A bespoke unit, designed to compliment the library interior, as such; finish, size and style can all be specified by the library. The internal smartChute™ is ideal for reception areas and foyers when users simply want to return their current loans.

Supplied with a touchscreen for user interaction, the internal smartChute™ allows for optional extras such as issue and renewal. Where security is not required, users simply press the return items button and deposit their books into the chute.

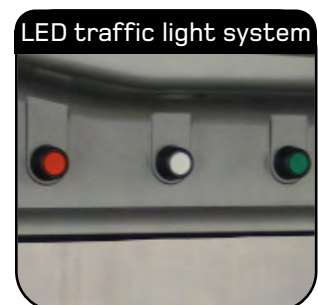

External smartChute™

A secure external return chute, which allows the customer to return items out-of-hours or without having to enter the library. The chute is mounted on an exterior building wall and is designed to withstand vandalism and harsh environmental conditions.

The external smartChute™ requires a user to present their existing library card to the unit before the chute will open, allowing items to be deposited. Video and text instructions are provided and a simple LED traffic light system is used for confirmation of item deposit.

Optional additions

Whether selecting an internal or external Chute, the library can choose whether to connect to an automated sorter, for automatic sorting upon return into a number of designated bins, or to connect to an individual spring-loaded return bins for manual sorting.

Order code(s)	INT-INTE-10000, Internal smartChute™ INT-EXTE-10000, External smartChute™
