

smartInventory™

mobile inventory & management

Inventory

The handheld can perform a complete inventory of all on-shelf items quickly and efficiently. Following an inventory, data can be uploaded to the LMS or analysed manually.

Search & seek

By downloading search list information, smartInventory™ can be used to find specific items on a shelf, or assist with shelf-tidying functions.

Tag programming functionality

Provides the ability to program information to a tag using the integrated barcode scanner. The device will simply write the barcode information to the tag immediately.

Touchscreen interface

Navigate menus simply by touching the screen with stylus or fingertip. Information relating to the current task is displayed, with notifications provided optionally via audible alerts or LED light.

Flexible design

The trigger controlled reader features a large flexible antenna that is designed to flex around the books as it is moved down the shelf edge. Once usage is complete the device can be returned to the charging station.

Connectivity

smartInventory™ connects with all standard Library Management Systems (LMS) using generic protocols. Additionally, files can be transferred via the built in wireless connector.
