

smartStation™

programming, issue and
return

Tag programming

smartStation™ provides the ability to quickly program information to a tag, by simply scanning to the existing barcode. Once scanned, the station will write the barcode information - and any other defaults (such as security) - to the tag immediately.

Verification

All information is verified once written to the tag in order to ensure items are tagged and programmed correctly. In addition, smartStation™ reports the status of security and any other information that may be stored on the tag.

Add/remove security

Using smartStation™, items within a library can have their security added or removed without interaction with the Library Management System (LMS). This may be applied to one item at a time, or many items if placed on the pad.

Issue and return items

For instances requiring staff member assistance, smartStation™ allows all items to be issued and renewed, with all the functionality of the self-service solutions, even down to the ability to print receipts for the customer.

Touchscreen

Read aperture

Small footprint

Order code(s)	INT-TERM-10004, smartStation™
Software	Comes complete with Microsoft Windows XP (SP2) operating system, ready to run the Intelligent Liber8™ software platform. Network connectivity is required to the LMS
Dimensions (mm)	Antenna : 34.00 cm height, 24.00 cm width, 1.00 cm depth
