

# smartSorter™

automated returning & sorting

### Modular options

The number of diverters that can be added to the unit is only limited by the space it has. It is also possible to add several return units to one smartSorter™.

### High speed

The sorter is capable of sorting at speeds of up to 15 items per minute, ensuring that it is capable of processing large amounts of stock in a short time.

### Configuration

The core diverter unit allows for sortation of books into three categories of the library's choosing, additional units can be added at a further two categories per diverter.

### Categories

Categories can be selected by the library; common options include by floor, genre or area within the library plus an extra bin for exceptions.

### Remote warnings

When a return bin reaches capacity warnings are provided to staff via the staff station to advise that the bin will need replacing.

### Return bins

Bins are spring loaded to prevent item damage. Each can hold, on average, 100 items. Bins are equipped with wheels and handles to enable quick swop out when full.
