

Staff processing station

Complete tag programming, issue and return solution

Integrates within existing furniture to provide staff with the ability to program items and issue and return for customers

Intelligent's staff station is an integrated RFID reader/writer and antenna designed to be operated via existing PC equipment. The station comes complete with dedicated software, which can be used to perform a variety of tasks with RFID-enabled items within the library.

The staff station provides the following functionality:

Tag programming station

All items within the library must be programmed at some point in order that they can then be issued and renewed using self-service equipment. The staff station provides the ability to quickly program information to a tag, by simply scanning the existing barcode. Once scanned, the station will write the barcode information - and any other defaults (such as security) - to the tag immediately. Written information will then be verified to ensure that the process was successful. The staff station also has the functionality to enable manual sortation of tagged items.

Verification

The staff station can be used to simply verify that items are tagged and have been programmed correctly. In addition, the station will also report the status of security and any other information that may be stored on the tag.

Add/remove security

Items within a library can have their security added or removed without interaction with the Library Management System (LMS) using the staff station. This may be applied to one item at a time, or many items placed on the pad.

Issue and return items

There may be instances when customer items need to be issued or returned by a member of staff. The staff station allows all items to be issued and renewed, with all the functionality of the self-service solutions. Security is added or removed, the LMS is updated and receipts can be printed for the customer.

Staff processing station

Complete tag programming, issue and return solution

Order code(s)	INT-TERM-10004, Staff Station
Software	Microsoft Windows XP (SP2) operating system, running the Intellident Liber8 software platform.
Dimensions	Antenna : 34.00 cm height, 24.00 cm width, 1.00 cm depth
Receipt printer	Fully customisable receipts, printed on thermal 80mm width roll
Reporting	Remote configuration and diagnostics available via Liber8 software platform, including: receipt and screen configuration, receipt low, bin full and coin storage full notifications.
Options	INT-EQUI-10008, Seperate barcode scanner

Library Management System connection

As with all the Intellident self-service solutions, the return chutes connect to existing Library Management Systems (LMS) using the industry standard SIP2 protocol. By configuring the Liber8 self-service software to suit the individual requirements of the library, little or no alterations are required to the LMS.

About Intellident

Intellident is the UK's leading provider of Smart Media solutions with an unprecedented client base, including a county-wide installation within Essex County Council libraries, the largest RFID-enabled academic libraries at Nottingham Trent University and University of East Anglia, and a wide range of local authorities and private libraries.
